

Open Questions

Answers needed to complete the project bible

This form collects the 56 open questions raised while drafting the design plan and project bible for the front-page redesign. 9 are marked as blocking — work on the corresponding phase cannot start responsibly until they're answered. The rest can be answered at any pace.

■ **BLOCKING — answer these first**

Marked with a red bar and "BLOCKING" label. These gate a specific build phase or artwork decision.

Type directly into the answer box under each question. Leave any blank you're not ready to answer — partial answers are fine to send back.

SECTIONS

- | | |
|---|---|
| A Product and scope (5 ■) | B Brand and visual identity (6) |
| C The logo (4 ■) | D The road artwork and seam contract (8 ■) |
| E Submissions and contributors (7 ■) | F Moderation and reporting (5 ■) |
| G Backend and data (4) | H Infinite scroll (4) |
| I Accessibility decisions (3 ■) | J Tech stack (4 ■) |
| K Deployment and operations (3) | L Process (3) |

SECTION A Product and scope

- 01** Is there a launch target or deadline, and is this a portfolio piece, a public toy meant to actually get traffic, or something in between?

Affects how much moderation/abuse-handling infrastructure is worth building up front.

- 02** Roughly what scale are you designing for — dozens of sections, thousands, or genuinely unbounded?

Affects whether section unloading is needed at all.

- 03** Is there any page other than the front page and the "create a section" flow?

An about page, a contributor list, a single-section permalink page?

- 04** **BLOCKING**

What is the URL scheme for an individual section?

test.py notes the URI is derived from sequential_id. /s/1631? /section/1631? A hash fragment? Affects the share action and no-JS pagination.

- 05** Does the road have a defined "end" at the bottom (a first section, a title card), or does it just stop?

SECTION B Brand and visual identity

06 Does the proposed palette work for you — specifically the road-sign green accent?

If not, is there a colour you already associate with the project?

07 Do the type recommendations (Fraunces / Instrument Sans / IBM Plex Mono) work? Any existing typeface preferences or licences?

08 Is there any existing brand material — colours, a wordmark, a previous sketch — not yet shared that should be matched?

09 Does the "modern gallery" metaphor extend to the copy?

Should UI text use gallery language ("plaque", "hang", "accession"), or stay plain?

10 How should section numbers be padded once they exceed 9999?

Keep growing (#10000), or switch format?

11 Should the newest section be visually marked as new, and for how long?

SECTION C The logo

12 **BLOCKING**

When will the logo be available, and in what format?

Phase 3 of the build order blocks on it.

13 **Can your sister supply a single-colour SVG usingcurrentColor, so it inverts for dark mode?**

If it must be multi-colour, a second dark-mode variant is needed.

14 **Is there a mark/icon separate from the wordmark (for favicon and social cards)?**

15 **Roughly what aspect ratio should be reserved for it?**

SECTION D The road artwork and seam contract

16 BLOCKING

Do you accept the universal-anchor approach — every section entering and exiting at the same x-coordinates?

The single highest-leverage decision in the project. Everything in Phase 1 waits on it.

17 BLOCKING

If yes: are 800 units wide, anchors at $x=300$ and $x=500$, and a 200-unit seam width the right numbers?

These are proposals, not measurements of anything real.

18 BLOCKING

What height range should sections be allowed?

Proposed: 400–1600 units, i.e. $0.5\times$ to $2\times$ the width.

19 Should the road be a fixed width throughout a section, or free to widen/narrow between the seams?

The existing art varies — Road_2 narrows to 138 units at its exit against 175–177 elsewhere.

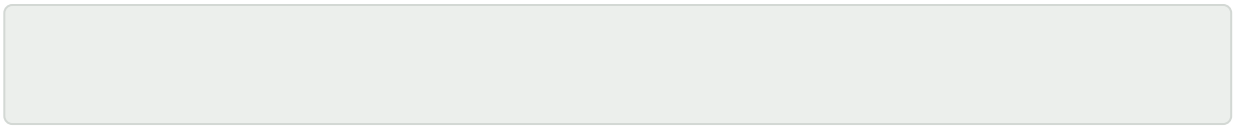

20 Are the two existing PNGs meant to survive as real sections, or were they always throwaway test art?

Converting them to the new contract is work; discarding them is free.

SECTION D (CONTINUED)

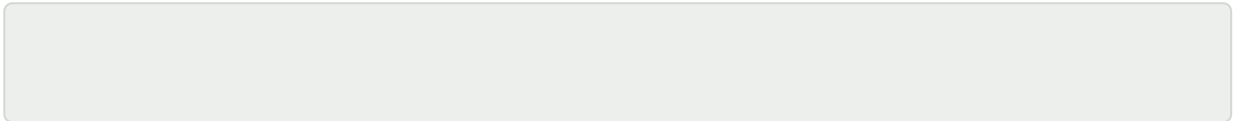

21 Will contributors draw in an in-browser tool, upload a file, or both?

Determines whether the seam contract is enforced by the tool or validated on submission.

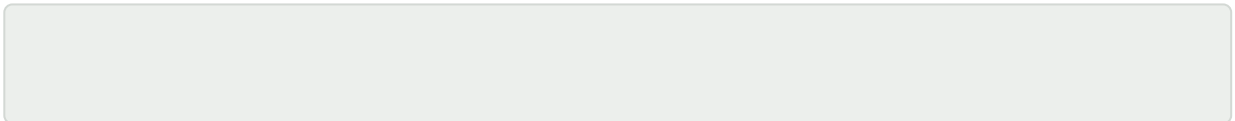

22 If uploads are allowed: SVG only, or raster too?

Raster brings a real accessibility, performance, and moderation cost, and cannot recolour for dark mode.

23 Is any content beyond a road line allowed in a section — scenery, buildings, text, a signature?

SECTION E Submissions and contributors

24 **BLOCKING**

Do contributors need an account, or is submission anonymous?

25 **If anonymous: how is author_name handled — free text with no verification?**

What stops impersonation or slurs in the name field?

26 **Is there any rate limiting or spam prevention planned (captcha, cooldown, honeypot)?**

27 **Are submissions published immediately, or queued for review?**

28 **Can a contributor edit or delete their own section after publishing?**

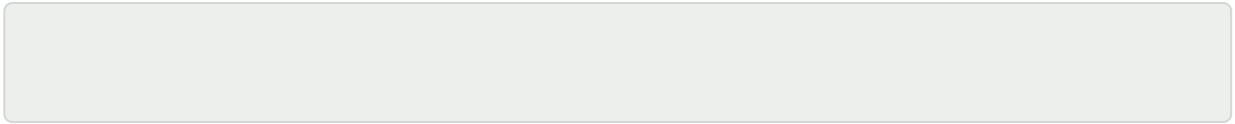

29 **Are there field length limits for title, description, and author name?**

The design assumes a description clamped to ~6 lines with a "read more" disclosure — what's the actual maximum?

SECTION E (CONTINUED)

30 Where does the "create a section" flow live, and does it exist in any form yet?

The head tile links to it.

SECTION F Moderation and reporting

31 **BLOCKING**

Where does a report actually go?

Email, a Django admin queue, a GitHub issue, a Discord webhook? The UI is spec'ed but has no destination.

32 **What does a report ask for — a reason category, free text, both?**

33 **What happens to a reported section while it's under review — stays visible, hidden, blurred?**

34 **Who moderates, and is there an admin interface requirement?**

35 **If a section is removed, does the road close the gap (renumbering everything) or leave a placeholder?**

Renumbering breaks every existing permalink and the loader's cursor assumptions.

SECTION G Backend and data

- 36** Is Issue #3 (models, streaming) going to be built before or in parallel with this design work?

Phase 5 of the build order depends on it.

- 37** Where is artwork stored — filesystem, S3-alike, database? Is there a CDN?

- 38** Is SQLite the intended production database, or is Postgres planned?

- 39** Are the height_units and optional-alt-text fields proposed for the model acceptable additions?

SECTION H Infinite scroll

40 You mentioned the mechanics are worked out elsewhere — can that be shared?

dynamicLoaderDesign.txt is currently two lines; the design should not contradict whatever was decided.

41 Is the Infinite Scroll JS library (referenced in Issue #1) still under consideration, or is this being hand-rolled?

42 Is a no-JS fallback path acceptable to build, or is JS assumed?

43 Should the URL update as you scroll, so a reload returns you to the same stretch of road?

SECTION I Accessibility decisions

44 **BLOCKING**

Do you accept the alt-text approach — alt="" on the artwork with the figcaption carrying the meaning, plus an optional contributor description field?

Alternative: require alt text from every contributor — more correct in principle, produces a long tail of "asdf" in practice.

45 **Is there a specific accessibility standard you're being held to (a client requirement, a course rubric, EN 301 549), or is WCAG 2.2 AA self-imposed?**

46 **Do you have access to a real screen reader for manual verification passes, or should that be planned around?**

47 **BLOCKING**

Sass: add it properly, or drop the claim?

Not currently installed. Recommendation is to drop it — Tailwind v4's @theme handles runtime-themeable variables better than compile-time Sass variables can.

48 **DaisyUI: remove it?**

Installed, generating tokens into the bundle, used nowhere. Recommendation is removal.

49 **Is there a browser support floor?**

Several recommendations (grid-template-rows transitions, content-visibility, :focus-visible) are broadly supported but not universal.

50 **Any constraint on adding JS dependencies, or is vanilla-only preferred?**

SECTION K Deployment and operations

51 Where will this be hosted?

ALLOWED_HOSTS is empty and SECRET_KEY is hardcoded in settings.py — both need fixing before any deploy.

52 Is there a CI pipeline, or should one be proposed?

The accessibility gate in Phase 6 assumes CI exists.

53 Is analytics or error tracking wanted?

SECTION L Process

- 54** What is @limesouls (Damian) working on right now, and how should design work be split to avoid collision on index.html?

- 55** Should this bible live in the repo (e.g. docs/BIBLE.md), and should the design plan go with it?

- 56** Do you want the design plan's phases turned into GitHub issues?
